

BIZDOC

AUTOMATE THE CREATION AND DISTRIBUTION OF YOUR DOCUMENTS FOR A HIGHER ROI

Most companies regardless of size constantly strive for improved efficiency in their work- and output processes. With your Microsoft BizTalk Server, you have already committed to achieving an optimum systems flow. Now take full advantage of your investment and use your Microsoft BizTalk Server platform as a central part of your document management solution. Introducing BizDoc: our innovative product for integrated document design, print and distribution.

With an aim of making your work easier, your business more efficient and - by extension - more profitable, BizDoc uses Microsoft BizTalk Servers built on the Microsoft.NET framework. It is used together with Open Office templates created in, for example, Microsoft Office Word 2007 or later. The run-time components perform best with your existing Integration platform but can also be configured to run in Windows Azure, in WCF-services, AppFabric or custom Windows services. A document management system that helps you to distribute, print and archive incoming messages with ease and efficiency, BizDoc enables you to capitalise on your Microsoft BizTalk Server investment and enjoy more functionality. Output documents can be created in a variety of different formats, like docx, pdf or html, allowing the solution to be used professionally within your business, or in contact with external parties like your customers. What's more, you can easily create, structure and modify template files.

BIZDOC FEATURES:

- Generation of output documents from custom open office templates, such as Microsoft Word, are populated with data from any source using the BizTalk Server. Output documents can be tested and validated using the BizDoc Client tool without deployment being necessary.
- By using BizTalk it is possible to have configurable publisher/subscriber distribution of output documents.
- Output documents can be sent using any of the Microsoft BizTalk server adapters; file, email, ftp, sharepoint, etc.
- Emails are created in plain text or with an html body and output documents can be attached together with other arbitrary attachments.
- Documents can be sent to any printer on any printer server with different output options.

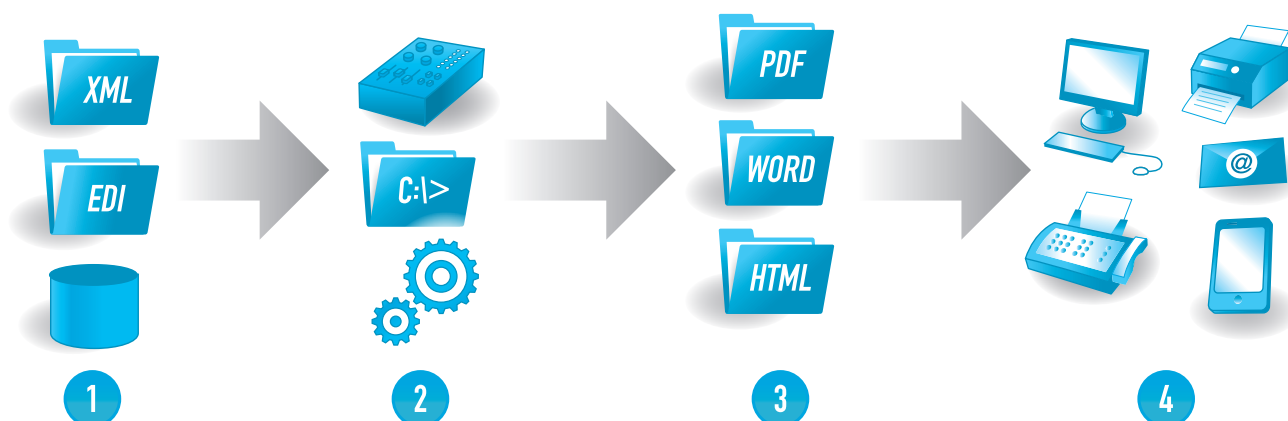

ENJOY MORE OPTIONS, MORE FLEXIBILITY AND GETTING THE WORK DONE!

With BizDoc you have an infrastructure to solve all of your document management needs. With its extended user-interface you can control and use it for efficient label printing, creation of invoices, payments, customs documents,

delivery notifications, visitor badges and reports via email, to name but a few. You also have the option of publishing and archiving data in repositories such as SharePoint, Wiki:s and EPiServer.

HOW BIZDOC WORKS

1. Read raw data from any data source in any format
2. Map incoming raw data to XML data designed for the specific document template
3. Generation of the output document
4. Distribution, printing and archiving of the document

THE EASIEST WAY TO DESIGN, PRINT AND DISTRIBUTE DOCUMENTS

With this effective document management system, you can forget being locked into pre-designed report templates and tools and discover more freedom and choice instead. The scalable architecture, including layered services and

components, offers true flexibility with which to meet customer specific-needs. Moreover, by using the full capabilities of your Microsoft BizTalk Server, you are sure to get optimum value and a higher return on your investment.
